

Red used/Black not used

SOME OF THE PROGRAMS AVAILABLE (average eligible family of 3 / < approx 20m/yr income/yr.)							
TANF		Temporary aid for needy families	YES	179	/Month	466/month for 60 months so used 38% ( for 13 years = 963 Number used in calculation	
MEDICAID POST YEAR 1		Health Benefits	YES	784	"		
FOOD STAMPS (food stamps)		Kaiser family foundation number 133.42/person	YES	400	"		Number used for SNAP
HOUSING ASSISTANCE	*	Unemployed housing	NO	1200	"		did not use because don't know what % would use
SSDI	*	social security disability insurance	NO	396	"		"
SSI	*	social security income	NO	733	"	"	
EITC	*	Earned Income tax credit	NO	267	"	"	
WIC	*	Nutrition for women Inf. Chld	NO	250	"	"	
				4209	total	black total \$ 2,979 red total \$ 1,230	

Used 50% of the total estimated births for the spreadsheet

Source: Library of Economics and Liberty statistics revised from family of 4 and California to family of 3 and average state

\* Areas for future study

**THERE ARE 79 PROGRAMS FOR SAFETY-NET FAMILIES: WE USED ONLY 3 PLUS SCHOOL. I LISTED 5 ABOVE NOT USED TO SHOW HOW MUCH MORE SAVINGS ARE AVAILABLE**

**OTHER POTENTIAL AREAS OF COST STUDY**

1. Determine percent of children that attend High School and calculate the cost
2. Calculate Birth Statistics to children born from safety-net parents
3. % of children that go int foster care AT PUBLIC COST
4. % of children born with disabilities greater than normal and costs
5. % of low weight children born and costs
6. Determine the usage of the other 71 programs that may be used by this population and their costs.

**QUESTIONS and FACTOIDS TO ANSWER LATER:**

1. Planned parenthood has 10% of the clinics but sees 36% of the patients. What is effect of defunding
2. How prevalent is the welfare scam business and the people that have children to make money.
3. Foster care in Philadelphia high schools are 1 in 5....Effect of birth control on this population
4. Only 30% of teens that need birth control are seen at clinics
5. Only 42 % of people who want birth control are able to get it.
6. 50% of families in the U.S. are single parent families

**"Inflated" data from senate budget committee, Congressional research service**

**Based on data from the Congressional Research Service**, cumulative spending on means-tested federal welfare programs, if converted into cash, would equal **\$167.65 per day** per household living below the poverty level. By comparison, the median household income in 2011 of \$50,054 equals \$137.13 per day. Additionally, spending on federal welfare benefits, if converted into cash payments, equals enough to provide \$30.60 per hour, 40 hours per week, to each household living below poverty. The median household hourly wage is \$25.03. After accounting for federal taxes, the median hourly wage drops to between \$21.50 and \$23.45, depending on a household's deductions and filing status. State and local taxes further reduce the median household's hourly earnings. By contrast, welfare benefits are not taxed.

SHOWS HOW CONSERVATIVE NUMBERS /

The cost of funding Family Planning is virtually zero and the benefits are HUGE

THIS STUDY DOES NOT INCLUDE SAVINGS from STD testing, Pap and HPV testing, and HIV testing that minimize future medical costs. It also DOES NOT INCLUDE extra costs of preterm births and low weight babies born from this population.

This spreadsheet only shows the savings achieved in births that did not occur due to the family planing already in place. IF the government spent and additional 2.37 billion dollars it could expect similar returns and as much as 760,000 of the 1 million abortions currently being done,could be eliminated. 1.1 million new welfare families would not be formed.
